

WHAT IS CLAIMED IS:

1. A connector, comprising:

an insertion terminal having a first side formed with an insertion end
and a second side formed with a receiving space connecting to the insertion
5 end;

a connecting member mounted on the insertion terminal and
including a quick connector inserted into the receiving space of the insertion
terminal, and a plurality of insertion posts each having a first end connected to
a distal end of the quick connector;

10 a plurality of connecting tubes each having a first end mounted on a
second end of a respective one of the insertion posts of the connecting member;
and

a plurality of optical fiber cables each having an end mounted on a
second end of a respective one of the connecting tubes and each contacting
15 with the second end of a respective one of the insertion posts of the connecting
member.

2. The connector in accordance with claim 1, wherein each of the
optical fiber cables is co-axial with a respective one of the insertion posts of the
connecting member.

20 3. The connector in accordance with claim 1, wherein the first end of
each of the connecting tubes is formed with a first insertion hole for insertion
of the second end of a respective one of the insertion posts of the connecting

member, and the second end of each of the connecting tubes is formed with a second insertion hole for insertion of a respective one of the optical fiber cables.

4. The connector in accordance with claim 3, wherein the first
5 insertion hole of each of the connecting tubes is co-axial with the second insertion hole.

5. The connector in accordance with claim 3, wherein the first insertion hole of each of the connecting tubes has a diameter different from that of the second insertion hole.

10 6. The connector in accordance with claim 3, wherein the first insertion hole of each of the connecting tubes has a diameter the same as that of the second insertion hole.

7. The connector in accordance with claim 1, wherein the connecting tubes have different sizes.

15 8. The connector in accordance with claim 1, wherein the connecting tubes have the same size.

9. The connector in accordance with claim 1, wherein each of the insertion posts of the connecting member is protruded outward from the receiving space of the insertion terminal.

20 10. The connector in accordance with claim 1, wherein each of the insertion posts of the connecting member has a cylindrical shape.

11. The connector in accordance with claim 1, wherein the connecting member further includes a plurality of connecting portions each having a first end connected to the distal end of the quick connector and a second end connected to the first end of a respective one of the insertion posts.

5 12. The connector in accordance with claim 11, wherein each of the connecting portions of the connecting member is protruded outward from the receiving space of the insertion terminal.

13. The connector in accordance with claim 1, further comprising a plurality of protective jackets each mounted on an outer wall of a respective
10 one of the connecting tubes.

14. The connector in accordance with claim 11, wherein each of the connecting tubes is co-axial with a respective one of the insertion posts of the connecting member.
